VINAT KUMAR GUPTA

SENIOR DATA ENGINEER

CONTACT

9754688678
abc@GMAIL.COM
BANGALORE, KARNATAKA

SKILLS

- Apache Hadoop
- Apache Spark
- Java
- Distributed Database
- GCP/AZURE Cloud
- Elastic Search
- HBase
- Apache Airflow
- Performance Tuning
- Apache Hive
- Geo Spatial
- RDBMS (Oracle, Postgres)
- Data Warehousing
- Data Migration
- Kubernets

EDUCATION

Bechlor Of Engineering in Computer Science

Institution: LNCT Group Of Colleges Bhopal
Year of Graduation: 2013-2017

SUMMARY

I have 7+ Years of overall IT Experience as a Senior Data Engineer.
Expertise in Apache Hadoop | Apache Spark | JAVA | GCP/AZURE Cloud | Distributed Database | Elastic | HBase | No-SQL Database | SQL Database.
And Complex data structure, JSON, XML, and Structure data.

WORK EXPERIENCE

SENIOR DATA ENGINEER

WALMART GLOBAL TECH INIDA **FEB 2022- CURRENT**

- Handle Large Scale Peta bytes of retail data through Spark and Java in Azure and GCP based cloud platform.
- Design data flows orchestration in Apache airflow.
- Design and create automated CI/CD pipeline for deployment.
- Developed & Optimise various ETL Spark Job.
- Migrate Azure cloud based Big Data System to GCP Cloud based system.
- Reduced the cloud cost of the project after Azure to GCP Migration from 18 KPD to 7 KPD.
- Optimise the spark job to reduce the load from Elastic Cluster.
- On-hand experienced to optimised spark job performance tuning by 100% resource utilisation.
- Provided technical support in troubleshooting issues related to data processing or storage systems.
- Helped scale forecasting platform to be able to deploy to multiple international markets of Walmart.

DATA ARCHITECT

GLOBANT INDIA **SEP 2021- FEB 2022**

- ET L developer, under GBA product (Global Brand Analytic).
- Develop Talend based ET L jobs to transform the raw data.
- Monitored ET L processes to ensure that they are running efficiently with minimal errors.

SENIOR DATA ENGINEER

JIO PLATFORM LIMITED **June 2018- SEP 2021**

- Responsible for understanding the requirement from the Requirement owner.
- Responsible for code design and breaking the requirements to small tasks.
- Collaborated with other teams to understand their requirements and deliver solutions accordingly.
- Developed data pipelines in Spark, Java to ingest and process large datasets.
- Ensured data accuracy through regular testing and validation procedures prior to deployment in production environments.
- Responsible for code optimization and Spark memory Tuning in order to improve spark job performance.
- Provided technical support in troubleshooting issues related to data processing or storage systems.
- Experience to develop efficient code to process the 60-70 Tera bytes of data on Quarterly (Every 15 minutes), Hourly, Daily, Weekly and Monthly basis spark jobs scheduled.

LANGUAGES

English

Hindi

DATA ENGINEER

INNOEYE TECHNOLOGY **June 2017 - June 2018**

- R&D on new API's provided by Apache.
- Experienced in Implementing spark RDD, DataFrame and Dataset.
- Responsible for Writing new Spark Jobs for requirement. and also
- Responsible for fixing production defects.
- Implemented Apache DataFrame over RDD in existing Projects.
- Optimizing existing Spark Jobs using Spark-SQL, DataFrame and RDD.

Achievement

Filed an U.S. Patent

SYSTEM AND METHOD FOR AUTOMATED PLANNING OF NEXT GENERATION TELECOM NETWORK

The present disclosure provides the planning of the next generation network which complements an existing telecom deployment to achieve the desired KPIs from the combined network for both macro and small cell planning in an existing network in a cost- effective method to deploy ODSC cells and Macro Cells in a heterogeneous network.

Project

WALMART Global Tech India

Smart forecasting is a unified homegrown platform to generate Demand Forecast for Walmart Stores and eComm across multiple countries. Demand forecasting is a core function of supply chain driving assortment & modular planning, replenishment, fulfilment and transportation. It uses machine learning algorithms to capture sales trends and generate improved forecasts, which further helps in improving customer experience, sale, optimising operational cost and wastage to the tune of billions of dollars.

Jio Platform Limited

JCP (Jio Coverage Platform) is a 4G & 5G Site Deployment advanced engine for Telecom business. It also incorporates a workflow engine which can be tailored based on business rules to provide solutions to address issues identified by the platform. JCP identifies Coverage Holes, Data Consumption by end user, Site behavior by Coverage and Interference in the geography. JCP Supports GIS for Layers Visualization, Work order Generation, Report Generation for Field Agent. JCP can Handle Configuration Management, Performance Management, Fault Management for Stable 4G Network.
